## RESEARCH INTEREST

My work, on a broader scale, focuses on providing technology mediated care in the context of mental health. In this new model of care, the goal is to detect early warning signs and provide intervention even before the relapse happens — moving from reactive to preemptive care.

Towards that, I have designed, developed and deployed smartphone based sensing systems for **Bipolar** and **Schizophrenic** patients. I am also interested in enabling **circadian stability** in general population.
